#### Why ultrasonic cleaner ?

Specially designed transducers transform electric energy into mechanical vibrations. These are transmitted into the cleaning liquid, creating many tiny vacuum-filled bubbles which rapidly implode. This process, called cavitation, releases highly energetic jets of liquid which remove all kinds of contamination from metal, glass, and plastic surfaces. Every surface that comes in contact with the fluid is thoroughly cleaned.

Application : Auto part and machinery parts, Lab and medical instruments; Die casting and injection module; All metal / plastic parts are suitable for ultrasonic cleaner .
